TECHNICAL SKILLS

Languages: Go, C#, Python, TypeScript, JavaScript, Bash
Backend: ASP.NET Core, Fiber, FastAPI, Node.js, Express, NestJS, Bun, Deno
APIs & Messaging: REST, gRPC, GraphQL, RabbitMQ, Socket.IO
Databases: PostgreSQL, MongoDB, Redis, SQLite, Firebase
Frontend: React.js, Next.js, React Router, TanStack Query, Zustand, Zod, Tailwind CSS
Cloud & DevOps: AWS, Oracle Cloud (OCI), Azure, DigitalOcean, Vercel, Docker, Podman, GitHub Actions, Linux, Git

WORK EXPERIENCE

NAV India (Technology Arm of NAV Fund Services) — **Jul 2025 – Aug 2026**

Associate - Technology — *Apr 2026 – Aug 2026*

- Integrated a centralized password vault into the existing services and migrated legacy database credentials into it, decoupling secret management from application code.
- Built an LLM pipeline that categorizes unstructured emails in real time and dispatches authentication tokens to the matching scrapers, triggering automated downloads of financial statements before they are stored.

Trainee Associate - Technology — *Jul 2025 – Apr 2026*

- Designed and built a full-stack Role-Based Access Control (RBAC) framework from scratch: an authorization layer in FastAPI and permission-aware React components enforcing granular access policies.
- Developed a RabbitMQ consumer for asynchronous data synchronization, with idempotent MongoDB inserts and updates to keep data consistent in real time.
- Built a job-orchestration layer that caps concurrent login sessions across distributed scrapers, tracking state in MongoDB to prevent service-level bottlenecks.
- Automated daily MongoDB snapshot backups, adding a disaster-recovery layer.
- Wrote IronPython scripts that run in-memory financial calculations inside a C# service, adding calculations the base application did not support.

Blowbits Solutions LLP

Full Stack Intern — *Jan 2025 – Jun 2025*

- Designed and built a customer support ticketing system from scratch for end users and support agents: RESTful APIs in ASP.NET Core, a React frontend, PostgreSQL storage, deployed on AWS.
- Built an attendance and leave management system with ASP.NET Core, React, PostgreSQL and AWS, covering API design, database schema and responsive UI.
- Engineered a CAPTCHA recognition microservice in ASP.NET Core, running a pre-trained CNN (converted to ONNX) with ONNX Runtime and Emgu.CV for automated text extraction, deployed on AWS.

Techwondoe

Backend Intern — *Sep 2024 – Jan 2025*

- Developed and maintained microservices with NestJS, PostgreSQL and TypeORM, including a notification microservice used across the platform.
- Integrated HubSpot CRM through GraphQL and built RESTful APIs connecting the Next.js frontend to the NestJS backend.
- Synced AWS Cognito and Salesforce users so they could sign in through either service, generating and validating NCS-compliant UUIDv7 IDs for Salesforce registrations to match Cognito's, and handling edge cases such as registration across both authentication systems.

Software Development Centre, Manipal University Jaipur

Full Stack Developer — *Jan 2024 – Jun 2024*

- Built the backend and handled deployment of the university's notesheet management platform with Node.js, Express.js and PostgreSQL; the project won 1st place in the Software Development category (Minor Project).

Language and Cognition Lab, IIT Kanpur

Research Intern — *Jun 2023 – Jul 2023*

- Implemented an algorithm that generates Hindi pseudowords in a Flask and Jinja web app used for language experiments.

PROJECTS

- **Distributed Microservice Platform**: Self-hosted platform where HAProxy fronts a Go/Fiber API gateway with Redis-backed sessions and rate limiting, routing to gRPC services: authentication and content management in Go, and a financial ledger in C#/.NET 10. Services reach PostgreSQL only through PL/pgSQL stored procedures under least-privilege roles, run as Podman containers deployed with GitHub Actions, and serve four React and Next.js frontends on Vercel, including an AI chatbot built with the Vercel AI SDK. Architecture
- **B21**: Go-based relay for retrieving data through restrictive networks, with TOTP authentication for zero-trust access and range requests for resumable transfers. GitHub
- **PDF to PPT Converter**: Co-developed a web app that generates presentations from PDFs, with an Express.js REST backend and Python models for the AI conversion. GitHub
- **Shell Aid**: Go CLI that uses the Gemini API to turn natural language into cross-platform shell commands, with automatic OS and shell detection and side-effect analysis before running anything. GitHub

EDUCATION

Manipal University Jaipur **Jaipur, Rajasthan, India**
Bachelor of Technology in Computer Science Engineering *Oct 2021 – Jul 2025*

- CGPA: 8.57/10 (Dean's List)
